## Reprocessed Blood Pressure Cuff

---

### Indications for Use

Clinical applications for the Blood Pressure Cuffs are as follows: Used to monitor the vital signs of the patient

### Contraindications

The Cuff should NOT be used in the following conditions:

Any local condition in which the garment would interfere:

- open wounds
- untreated infected wounds
- gangrene
- recent skin graft
- dermatitis

### Warnings

- Do not apply cuff to areas on patient where skin is delicate or damaged.
- Check cuff site frequently for irritation.
- Allow space for 1 to 2 fingers between patient and cuff.
- Do not apply cuff to limbs used for IV infusion.
- For best results - minimize cuff movement and limb motion during readings.
- Ensure an airtight seal at all connection points prior to use.

### Cautions

- Proper cuff sizing and application is essential.
- Cuff should be removed immediately if the patient experiences tingling, numbness, or pain. The physician should be notified.
- Cuff should not be used over an open wound, gangrene, untreated infected wound, recent skin grafts, or dermatitis.
- Cuff should not be inflated too tightly so as not to occlude circulation.
- If inflated too loosely, the cuff will not deliver maximum benefits.

### Directions for Use

1. Select cuff size appropriate for the patient's arm circumference.
2. Place cuff under upper arm of patient.
3. Fold Velcro side of cuff over the first side. Secure Velcro attachment.
4. Ensure that the tubes are directed down away from the cuff.
5. Ensure that the cuff is securely attached to the patient.
6. Inflate cuff.
